- A. VxFS is a non-log file system that can support more than 2T files.
- B. File system snapshot using copy-on-write (copy-on-write technology) and other files together, share partition or volume storage space.
- C. Provide file system-level snapshots, copy.
- D. File System Snapshots, Scenarios, Replication, etc. Features are based on Storage Checkpoint.

Answer: B,C

Question: 3

True or False, In an OceanStor V3 system storage array, all the snapshots of a LUN occupy no more space than the LUN.

- A. True
- B. False

Answer: B

Question: 4

True or False, with a client using the SMB 1.0 / 2.0 / 2.1 / 3.0 protocol to perform file replication inside a Huawei OceanStor 9000, it does not need to pass through the client, but can be done directly to the system.

- A. True
- B. False

Answer: B

Question: 5

Client1 needs to read file X from a Huawei OceanStor 900 and the node that responds to the read request is node A. Based on this, which of the following are correct?

- A. If the system has monitored the file X has been cached on Node B, the client client1 can read the file directly from Node B.
- B. If the system monitors that node B has cached file X, then node A can read the file from node
- C. After HUAWEI OceanStor 9000 processes the request for reading the file X from client1, the system reserves the message on both node A and node B.
- D. If the system monitors that node A has cached file X, then node A only caches the data of file X and does not cache its verification data

Answer: B,D

Question: 6

For commonly used SQL Server 2005 and 2008, users can connect to the specified server through the SQL Server Management Studio tool Database Engine.
